(54) Title: DEVICE AND METHOD FOR SECTIONING A VERTEBRAL LAMINA

(57) Abstract: The present invention concerns a device for sectioning a vertebral lamina, characterized in that it comprises a base (4) for positioning the device and protecting the medullar canal when sectioning the lamina, sectioning means (1) slide-mounted in the base (4) along a first axis (A₁), a first piston slide-mounted in a sleeve (10) of the sectioning means (1) along a second axis secant to the first sliding axis (A₁) of the sectioning means, a second piston (3) made integral with the first piston (2) and slide-mounted in the base (4) along a third axis (A₂), the sectioning means (1) being provided with a cutting element oriented in opposite direction to the second piston (3) with respect to the sleeve (10), and the sliding of the second piston (3) along the third axis (A₂) causing the sliding of the sectioning means (1) along the first axis (A₁) via the first piston (2).

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
